SQS and SES Assignment

Problem Statement:

You work for XYZ Corporation. Your team is asked to deploy similar architecture

multiple times for testing, development, and production purposes. Implement

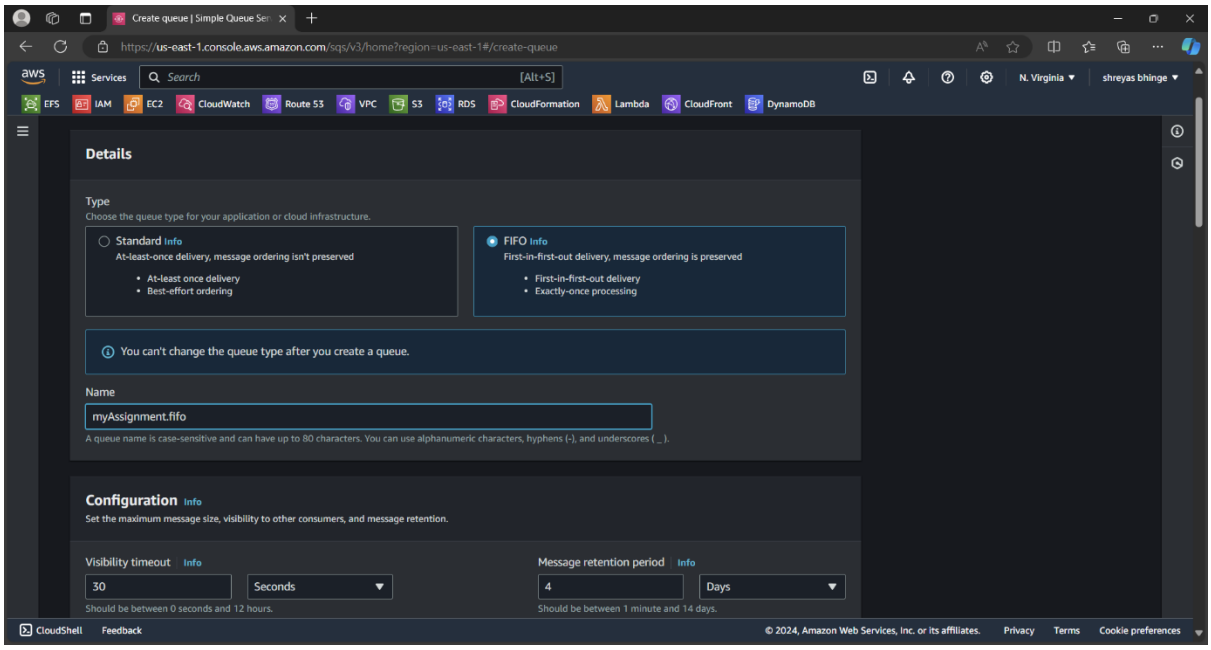
CloudFormation for the tasks assigned to you below.

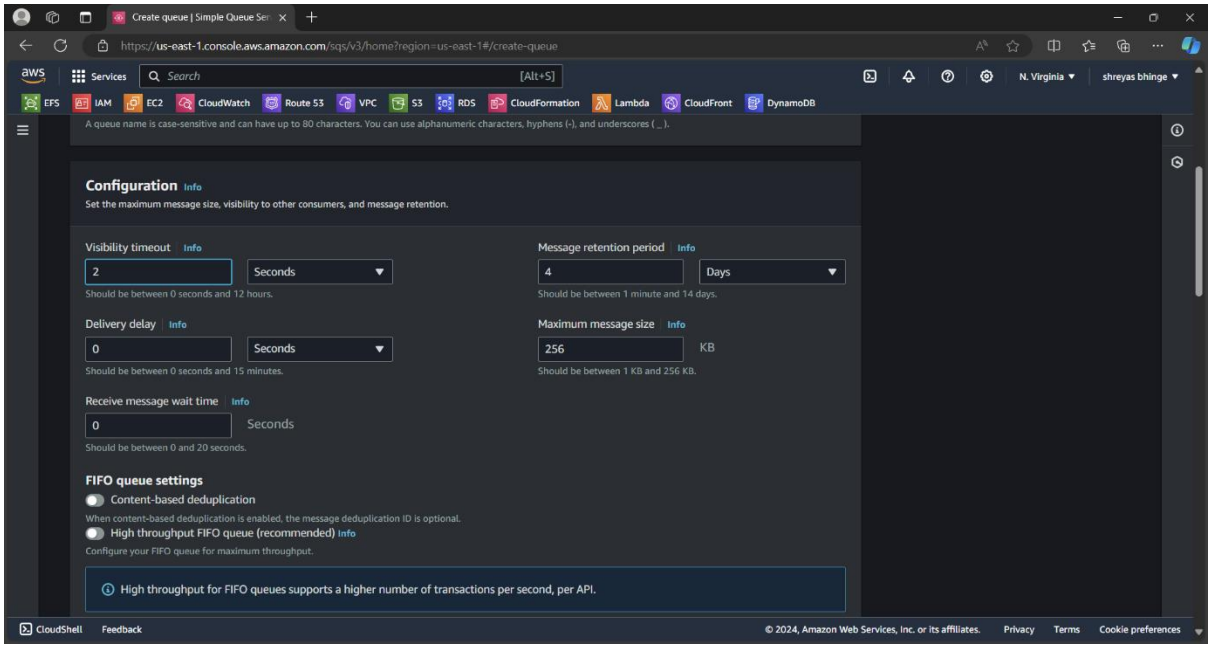
Tasks To Be Performed:

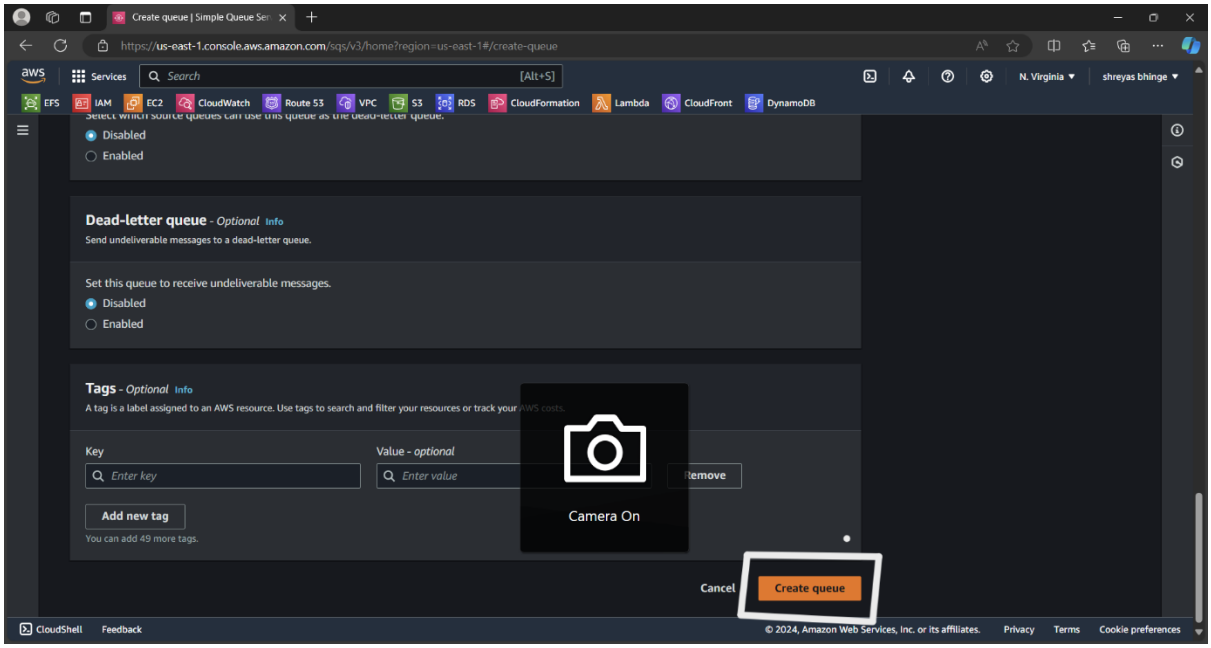
1. Create a FIFO SQS queue and test by sending messages.

2. Register your mail in SES and send a test mail to yourself

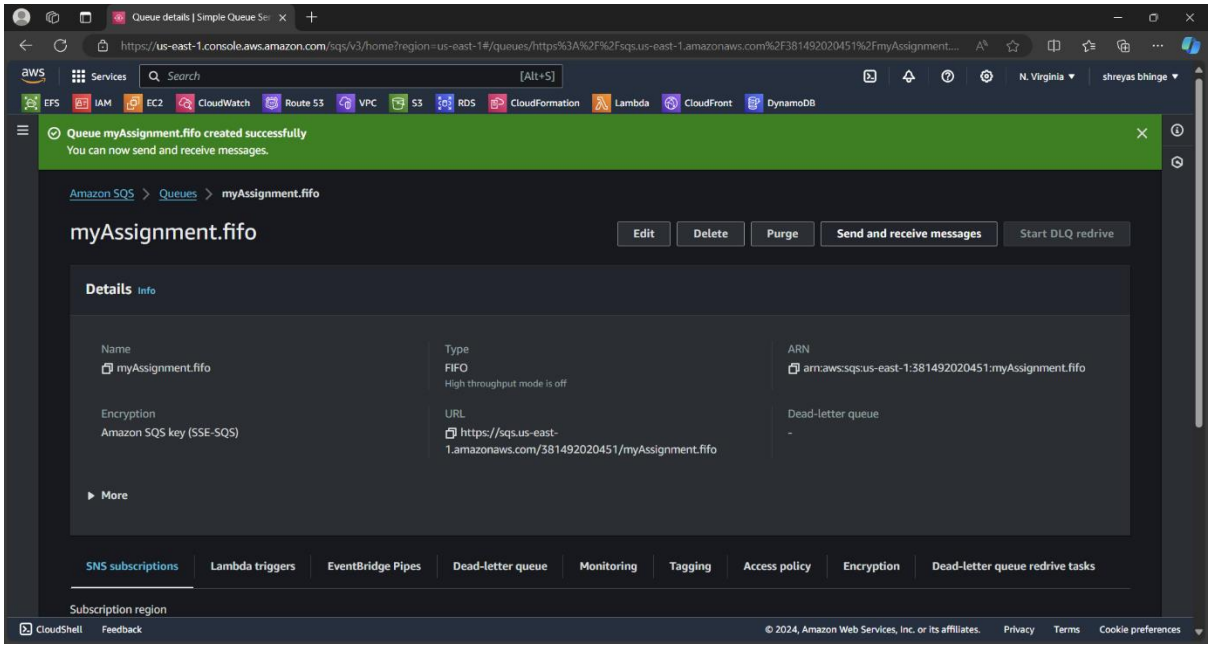
1. Create a FIFO SQS queue and test by sending messages:



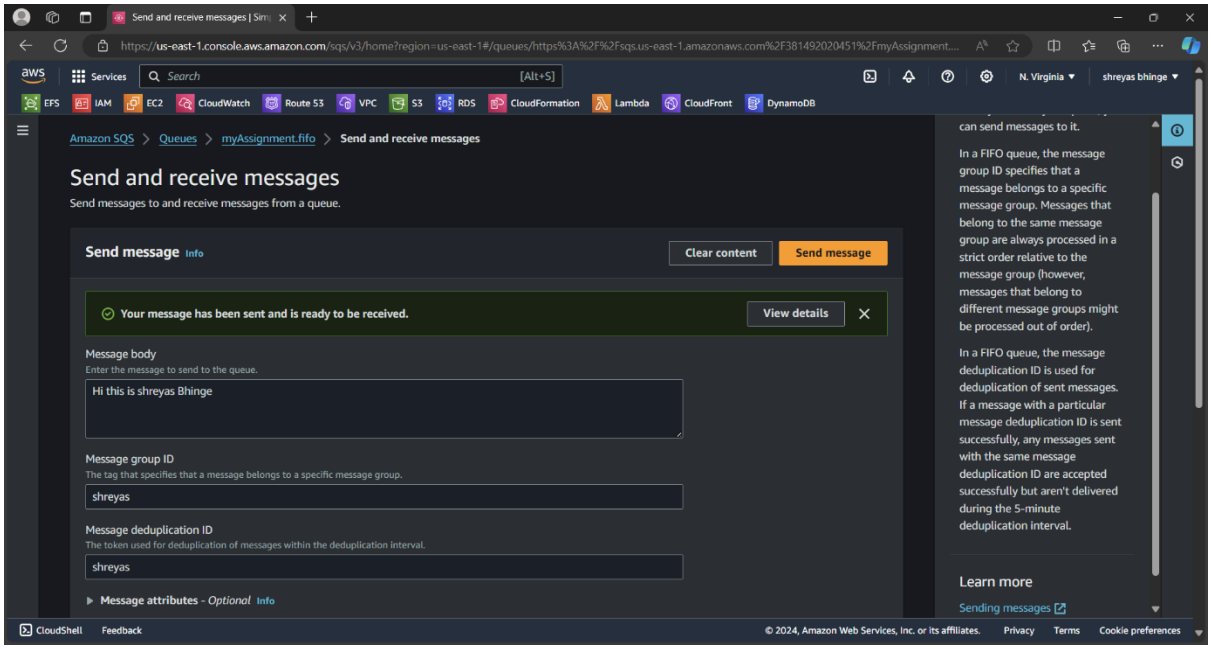


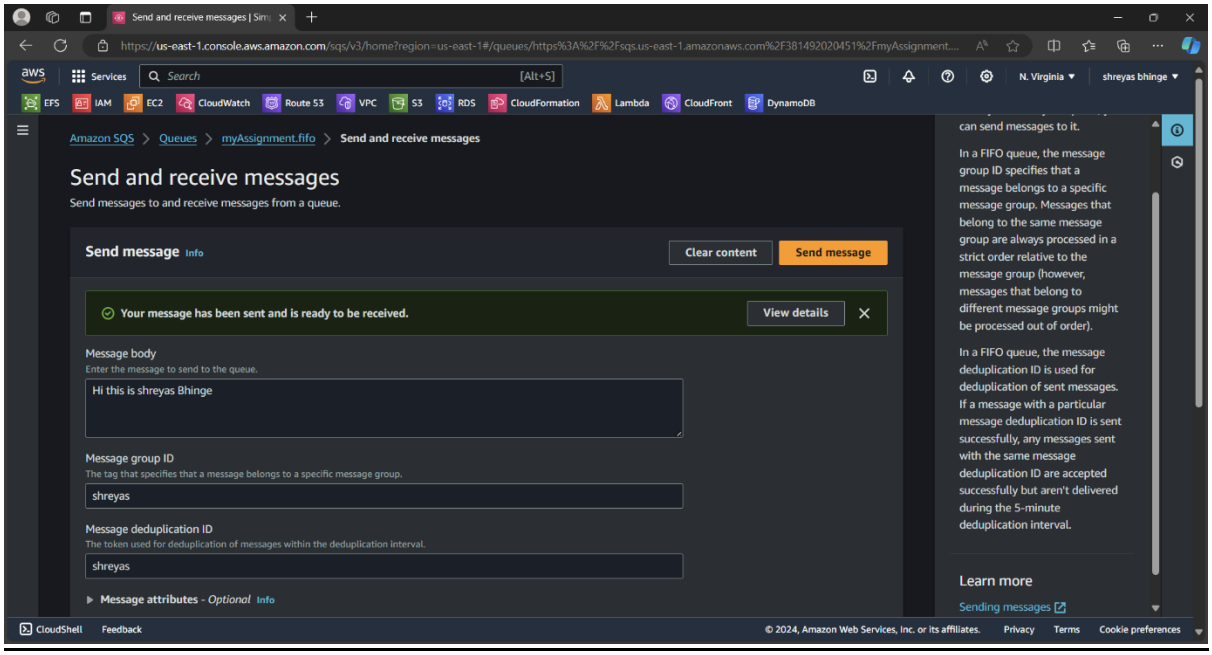


Queu will be created Then click on send and receive message

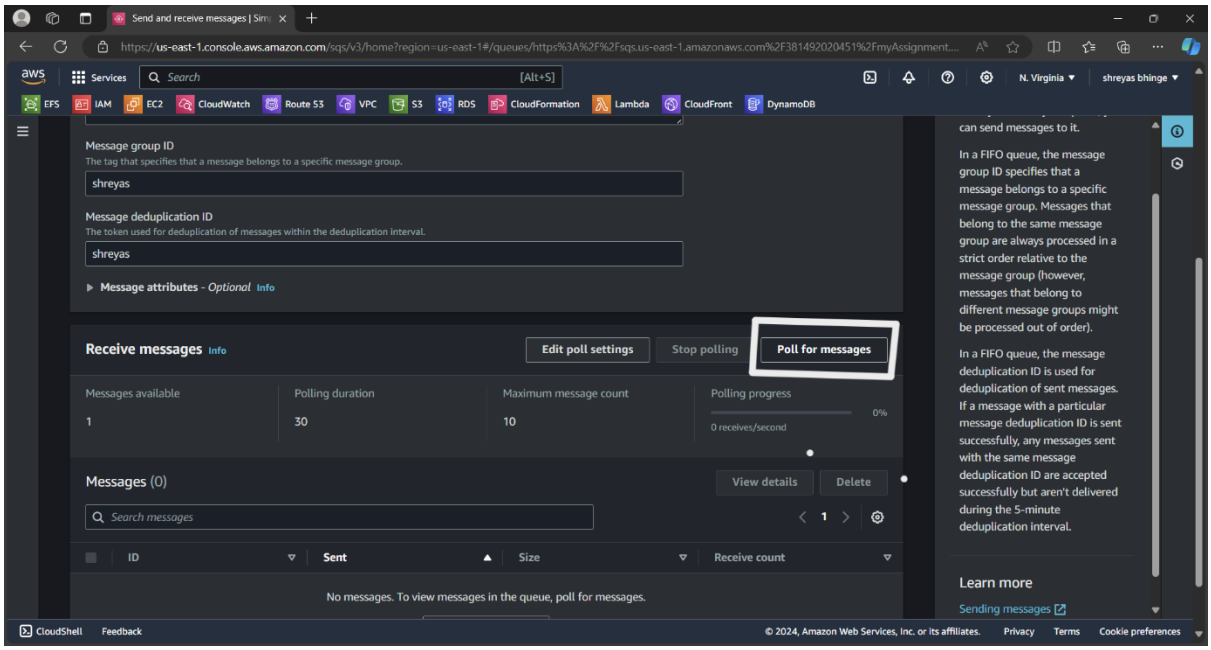


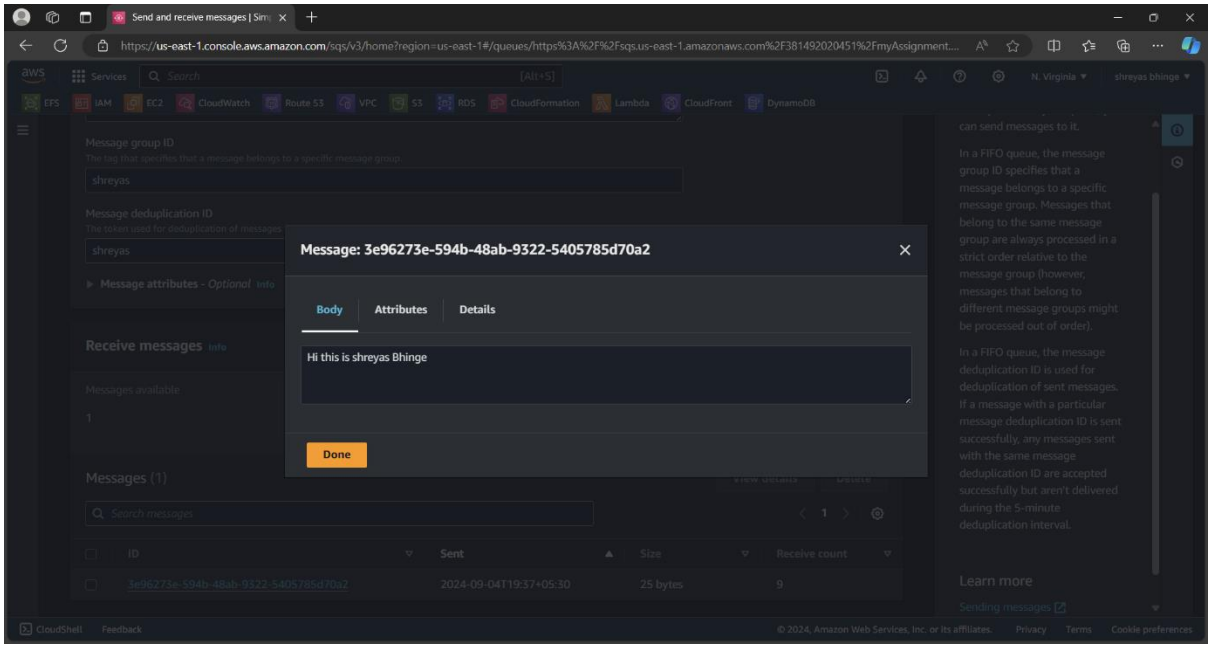
Add message body and other info





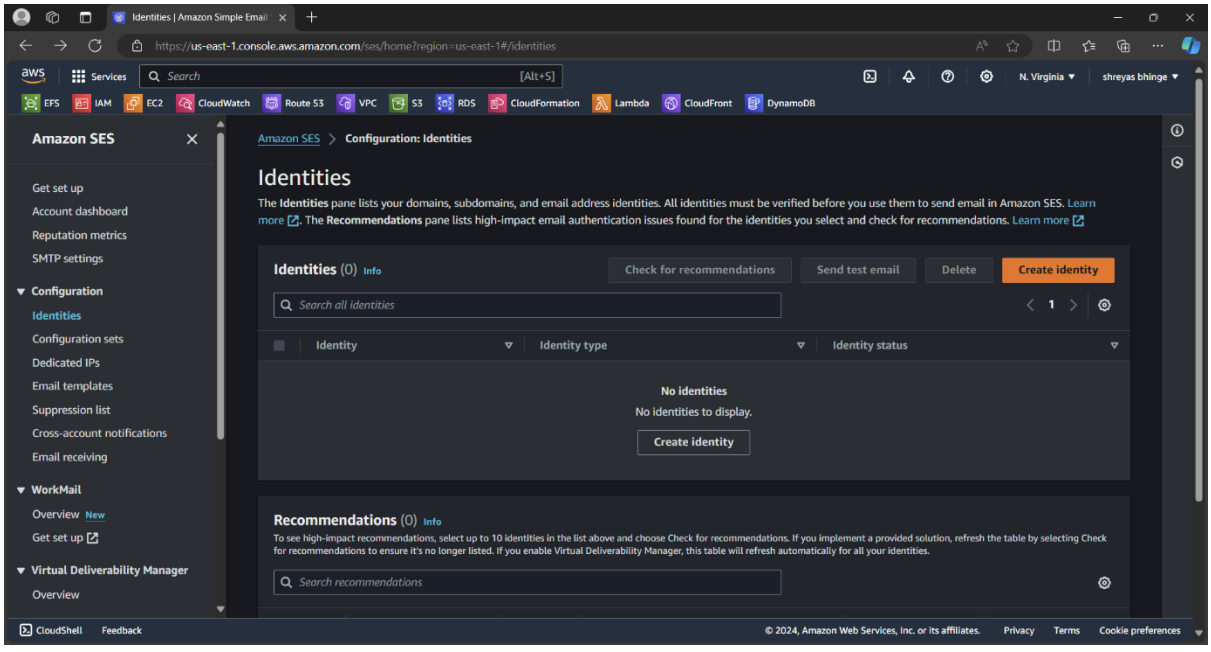
Click on poll message



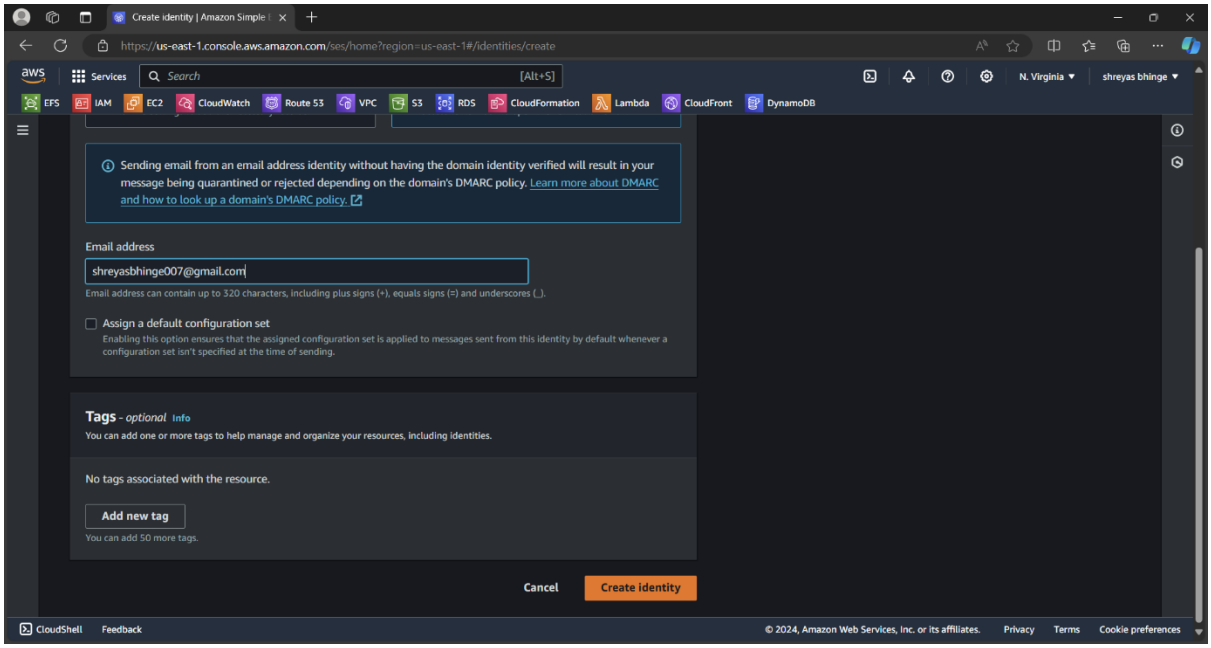


2. Register your mail in SES and send a test mail to yourself

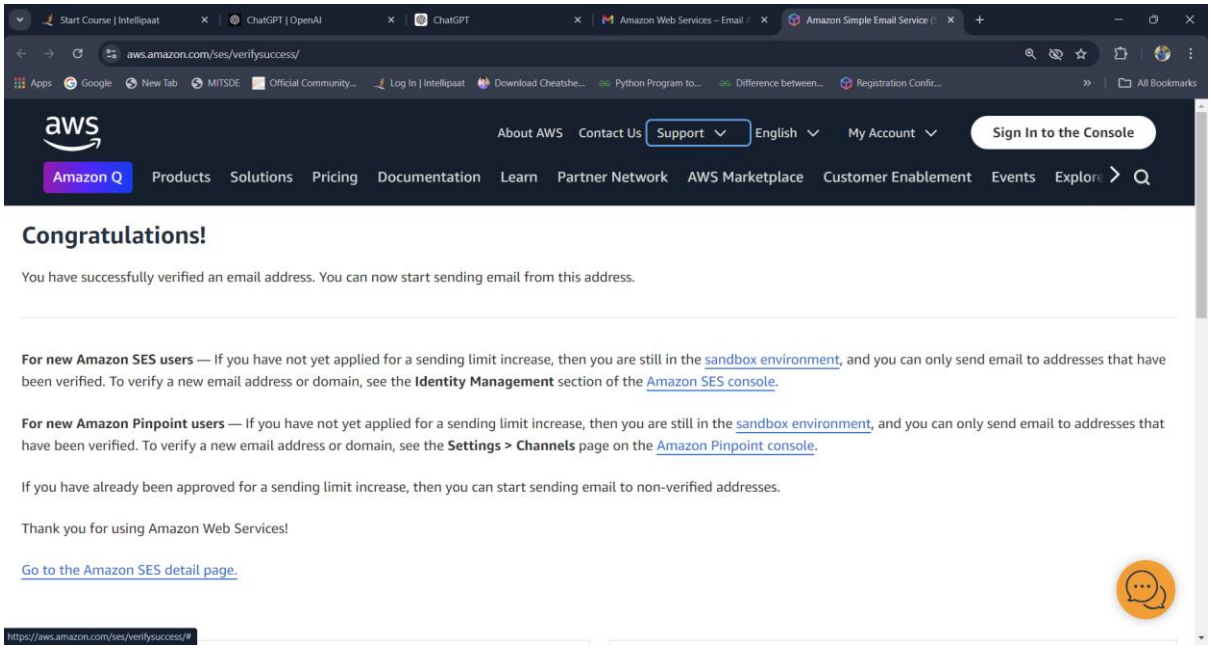
Go to SES and create identity



Add E-mail address



Verify E-mail in the G-mail



Click on send and test message

Message details
Email format
Formatted
Choose this option if you want to construct a simple test message using the form provided. SES takes the information entered in the form and parses it into email format for you.
Raw
Choose this option if you want to send a more complex test message, such as one that uses HTML or includes attachments. This option requires you to format the entire message yourself.
From-address
shreyasbhinge007@gmail.com
Scenario Info
Choose the email sending scenario that you want to simulate. Each scenario corresponds to a different recipient email address managed by the mailbox simulator. To specify a custom recipient, select Custom.
Custom
Use a recipient address of your own
Custom recipient
While your account is in the Amazon SES sandbox, you can only send test emails to other verified identities. If you've verified an identity at the domain level, you can send a test email to any email address under that verified domain.
shreyasbhinge007@gmail.com
Message Info
Your message must be constructed using MIME formatting and must specify all of the message headers, as well as the message body.
